

Code Transformation Summary by Amazon Q

TO Q has made the following changes during the transformation process.

■ Lines of code in your application: 1575

Transformation duration: 31 min(s)

→ There are no deprecated APIs detected in this app

≡ Files changed: 16

The Build status in Java 21: SUCCEEDED

Table of Contents

Build log summary Scroll to top

Amazon Q successfully built the upgraded code in Java 21. Here is a relevant snippet from the build log. To view the full build log, open buildCommandOutput.log

The build log indicates a successful Maven build process for a Java 21 web application. The compilation and resource processing steps completed without errors. Annotation processing was enabled during compilation, with a warning about potential future changes in this behavior.

Q Generated Summary and Recommendations

Scroll to top

Summary

Q has made the following changes during the transformation process. Please note that the summary is generated by GenAl.

- 1. **Dependency Updates**: Significant upgrades have been made to core dependencies, including:
 - JUnit upgrade from 3.8.1 to JUnit Jupiter 5.12.2
 - Spring Framework upgrade from 4.1.6.RELEASE to 6.2.3
 - MySQL Connector upgrade from 5.1.21 to MySQL Connector/J 9.2.0
 - Hibernate ORM upgrade from 4.1.6.Final to 6.6.9.Final
 - Spring Security upgrade from 3.2.5.RELEASE to 6.4.3

 SLF4J upgrade from 1.6.1 to 2.0.17 These upgrades bring the project up to date with the latest versions of critical dependencies, potentially improving performance, security, and feature set.

- 2. **Jakarta EE Migration**: The project has transitioned from <code>javax.persistence</code> to <code>jakarta.persistence</code> for all JPA annotations and related APIs. This includes updates in entity classes (<code>Shipping</code>, <code>Category</code>, <code>Feedback</code>, <code>Users</code>, <code>Products</code>, <code>Shoppingcart</code>, <code>Payment</code>, <code>Orders</code>, <code>OrderDetail</code>, and <code>Suppliers</code>) and the migration from <code>javax.ws.rs-api</code> 2.0 to <code>jakarta.ws.rs-api</code> 4.0.0. This change aligns with the move from Java EE to Jakarta EE, ensuring compatibility with newer Java EE specifications.
- 3. **ORM Framework Update**: The project has moved away from Spring's HibernateDaoSupport and HibernateTemplate to using Hibernate's SessionFactory directly. This change in the EntityManagerDao and UserDaoImpl classes indicates a shift towards more direct ORM operations, potentially improving performance and providing more control over database interactions.
- 4. **Query API Update**: The project has updated its query mechanisms, replacing Hibernate's **Criterion** with JPA's **Predicate**. This change in the **GenericDao** interface and its implementation suggests a move towards more standard JPA practices, which can improve code portability across different JPA providers.
- 5. **Test Framework Update**: The project has migrated from JUnit 3 (junit.framework.TestCase) to JUnit 5. This is evident from the changes in the TestUser class, where @Test annotations are now used instead of extending TestCase. This update allows for more modern testing practices and better integration with current build tools and IDEs.
- 6. **Logging Framework Change**: The project has moved from using Log4j 1.2.16 to Log4j 2.24.3. This is evident from the replacement of the log4j dependency with log4j-slf4j-impl. This update addresses security vulnerabilities in older Log4j versions and provides improved performance and features.
- 7. **Build Configuration Update**: The pom.xml now includes explicit Java compiler settings for Java 21:

```
<maven.compiler.source>21</maven.compiler.source>
    <maven.compiler.target>21</maven.compiler.target>
    <maven.compiler.release>21</maven.compiler.release>
```

This configuration ensures that the project is compiled with Java 21, taking advantage of the latest language features and optimizations.

- 8. **Annotation-based Configuration**: The addition of @Repository and @Transactional annotations in the EntityManagerDao and UserDaoImpl classes suggests a move towards more annotation-based configuration, which is in line with modern Spring practices and can lead to cleaner, more maintainable code.
- 9. **Hibernate Annotations Processor**: The addition of hibernate-jpamodelgen dependency indicates that the project is now using Hibernate's static metamodel generator. This can improve type safety when working with JPA criteria queries.
- 10. UserDao Interface Update: The UserDao interface in UserDao.java has been modified. The method retriveById(Users user) has been replaced with retriveById(Long userId). This change simplifies the method signature and improves type safety by using a specific Long type for the user ID instead of passing the entire Users object.

Recommendations

Q was able to compile the upgraded app successfully. Here are detailed recommendations to further improve the upgrade. Please note that these recommendations are generated by GenAl, apply them accordingly.

1. Please review and accept the code changes using the diff viewer. If you are using a Private Repository, please ensure that updated dependencies are available.

2. If this project uses Maven CheckStyle, Enforcer, FindBugs or SpotBugs plugins, Q disabled these plugins when building the project to verify proposed upgrades. Please enable them and verify the code again.

3. To help transform the rest of your code, you can use Amazon Q chat in the IDE. You can ask Amazon Q to review the partially updated files and provide new code to address issues, such as compilation errors. You can also use features like /dev and @workspace to include more of your project as context and get suggestions for multiple files at a time.

Planned dependencies replaced

Scroll to top

Amazon Q updated the following dependencies that it identified in the transformation plan

Dependency	Action	Previous version in Java 8	Current version in Java 21
com.mysql:mysql-connector-j	Added	-	9.2.0
commons-collections:commons-collections	Removed	3.2.1	-
jakarta.persistence:jakarta.persistence- api	Added	-	3.2.0
jakarta.ws.rs:jakarta.ws.rs-api	Added	-	4.0.0
javax.ws.rs:javax.ws.rs-api	Removed	2.0	-
junit:junit	Removed	3.8.1	-
log4j:log4j	Removed	1.2.16	-
mysql:mysql-connector-java	Removed	5.1.21	-
org.apache.commons:commons-collections4	Added	-	4.4
org.apache.logging.log4j:log4j-slf4j- impl	Added	-	2.24.3
org.hibernate.orm:hibernate-core	Added	-	6.6.9.Final
org.hibernate:hibernate-core	Removed	4.1.6.Final	-
org.hibernate:hibernate-entitymanager	Removed	4.1.6.Final	-
org.junit.jupiter:junit-jupiter	Added	-	5.12.2
org.slf4j:slf4j-log4j12	Removed	1.6.1	-

Additional dependencies added

Scroll to top

Amazon Q updated the following additional dependencies during the upgrade

Dependency	Action	Previous version in Java 8	Current version in Java 21
org.hibernate.orm:hibernate-jcache	Added	-	6.6.9.Final
org.hibernate.orm:hibernate-jpamodelgen	Added	-	6.6.9.Final
org.slf4j:jcl-over-slf4j	Updated	1.6.1	2.0.17

Dependency	Action	Previous version in Java 8	Current version in Java 21
org.slf4j:slf4j-api	Updated	1.6.1	2.0.17
org.springframework.security:spring- security-config	Updated	3.2.5.RELEASE	6.4.3
org.springframework.security:spring- security-core	Updated	3.2.5.RELEASE	6.4.3
org.springframework.security:spring- security-web	Updated	3.2.5.RELEASE	6.4.3
org.springframework:spring-aop	Updated	4.1.6.RELEASE	6.2.3
org.springframework:spring-context	Updated	4.1.6.RELEASE	6.2.3
org.springframework:spring-core	Updated	4.1.6.RELEASE	6.2.3
org.springframework:spring-orm	Updated	4.1.6.RELEASE	6.2.3
org.springframework:spring-test	Updated	4.1.6.RELEASE	6.2.3
org.springframework:spring-tx	Updated	4.1.6.RELEASE	6.2.3
org.springframework:spring-webmvc	Updated	4.1.6.RELEASE	6.2.3

Deprecated code replaced
